

After watching the videos explaining some important starting tips, your job is to do two things: demonstrate these ideas and take good photos of someone demonstrating.

- 1) Demonstrate how best to carry your camera.
- 2) Use Skitch to explain some tips that help you to use your camera strap better. (we aren't worried about kinds of straps and setup, so don't worry about the last part of the video)
- 3) Use Skitch to explain some tips about having your camera prepared for shooting when you need it. Explain how a lens shade can help, but DON'T worry about the filter information.
- 4) Explain and demonstrate "chimping."
- 5) Demonstrate and explain your camera's diopter.
- 6) Demonstrate and explain some of the ways to keep your camera stable when shooting.

Put those together in a folder and put the folder in your shared Drive or DropBox folder for me to look at.
